## MapTrakker

Tests that accurately reflect the instructional level of each student and measures growth over time.

MapTrakker. MAP or Measures of Academic Progress is a state-aligned computerized adaptive test that accurately reflects the instructional level of each student and measures growth over time. Created by the Northwestern Evaluation Association to provide states with research based assessments that can be used for the following:

- Identify the skills and concepts individual students have learned.
- Diagnose instructional needs.
- Monitor academic growth over time.
- Make data-driven decisions at the classroom, school, and district levels.
- Place new students into appropriate instructional programs.

MapTrakker will provide an ASP version of software that will allow teachers and administrators to create with just several clicks informative and useful data that teachers can use to create appropriate and relevant lesson plans. MapTrakker allows teachers to plan their instruction around state standards and identify the specific DesCartes skills that support the learning of the standard for each student in their class. As teachers select standards and indicators MapTrakker will find the DesCartes skills for each student. This allows hassle free method of differentiating instruction. MAP data shows us that all students are not at the same readiness level when we begin a unit of study built around state standards. MapTrakker takes this data and blends it into the traditional lesson plan format allowing teachers a hassle free way of differentiating instruction.
