TesTrakker

A hassle free way to differentiate instruction in a web based lesson planner.

TesTrakker. Measures of Academic Progress (MAP) is a state-aligned computerized adaptive test that accurately reflects the instructional level of each student and measures growth over time in order to:

- Identify the skills and concepts individual students have learned.
- Diagnose instructional needs.
- Monitor academic growth over time.
- Make data-driven decisions at the classroom, school, and district levels.
- Place new students into appropriate instructional programs.

TesTrakker will provide an ASP version of software that will allow teachers and administrators to create with just several clicks informative and useful data that teachers can use to create appropriate and relevant lesson plans. TesTrakker allows teachers to plan their instruction around state standards and identify the specific skills that support the learning of the standard for each student in their class. As teachers select standards and indicators TesTrakker will find the topics and skillsets for each student. MAP data shows us that all students are not at the same readiness level when we begin a unit of study built around state standards. TesTrakker takes this data and blends it into the traditional lesson plan format allowing teachers a hassle free way of differentiating instruction.
